

OhSINT Room

Are you able to use open-source intelligence to solve this challenge?

What information can you possibly get with just one image file?

 Download Task Files

In this room I only got a downloadable file for starting and get the most possible information on that. The file was an iconic image file of Windows XP desktop

The task is all about 7 questions that I must answer as I go further in the investigation. The questions are:

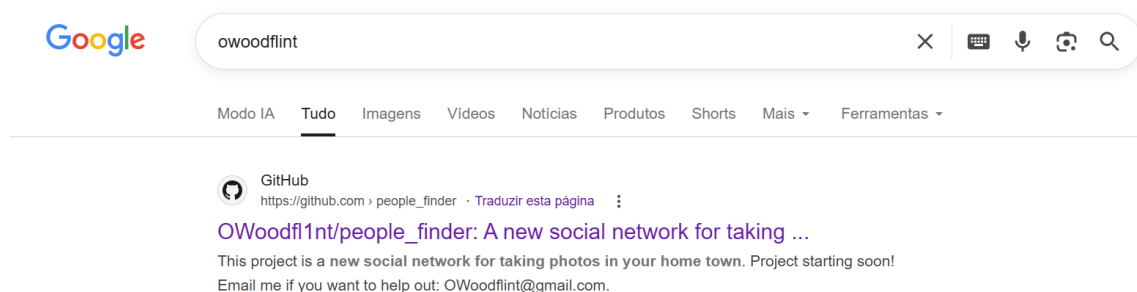

1. What is this user's avatar of?
2. What city is this person in?
3. What is the SSID of the WAP he connected to?
4. What is his personal email address?
5. What site did you find his email address on?
6. Where has he gone on holiday?
7. What is the person's password?

For starting, the first thing I did was to use Exiftool on the image. I got the following:

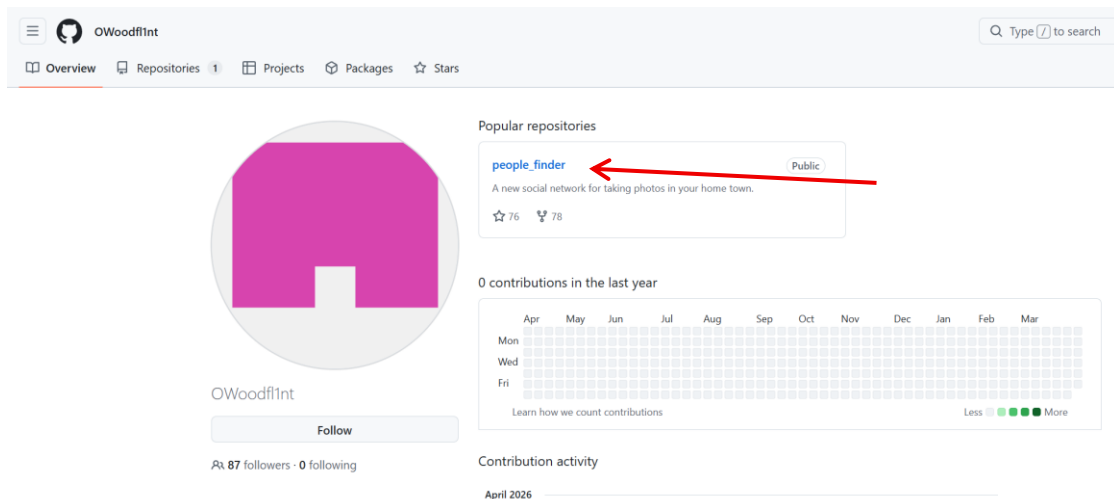

```
ExifTool Version Number      : 13.53
File Name                    : WindowsXP_1551719014755.jpg
Directory                   : C:/Users/ze_ma/Downloads
File Size                   : 234 kB
File Modification Date/Time  : 2026:04:10 18:36:49+01:00
File Access Date/Time       : 2026:04:10 18:37:01+01:00
File Creation Date/Time     : 2026:04:10 18:34:02+01:00
File Permissions            : -rw-rw-rw-
File Type                   : JPEG
File Type Extension         : jpg
MIME Type                   : image/jpeg
XMP Toolkit                 : Image::ExifTool 11.27
GPS Latitude                : 54 deg 17' 41.27" N
GPS Longitude               : 2 deg 15' 1.33" W
Copyright                  : OWoodflint
Image Width                 : 1920
Image Height                : 1080
Encoding Process            : Baseline DCT, Huffman coding
Bits Per Sample             : 8
Color Components            : 3
Y Cb Cr Sub Sampling       : YCbCr4:2:0 (2 2)
Image Size                  : 1920x1080
Megapixels                  : 2.1
GPS Latitude Ref            : North
GPS Longitude Ref          : West
GPS Position                : 54 deg 17' 41.27" N, 2 deg 15' 1.33" W
-- press ENTER --
```

In the analysis of this Exiftool result, there are some things that immediately stand out. But for now, I start with the copyright.

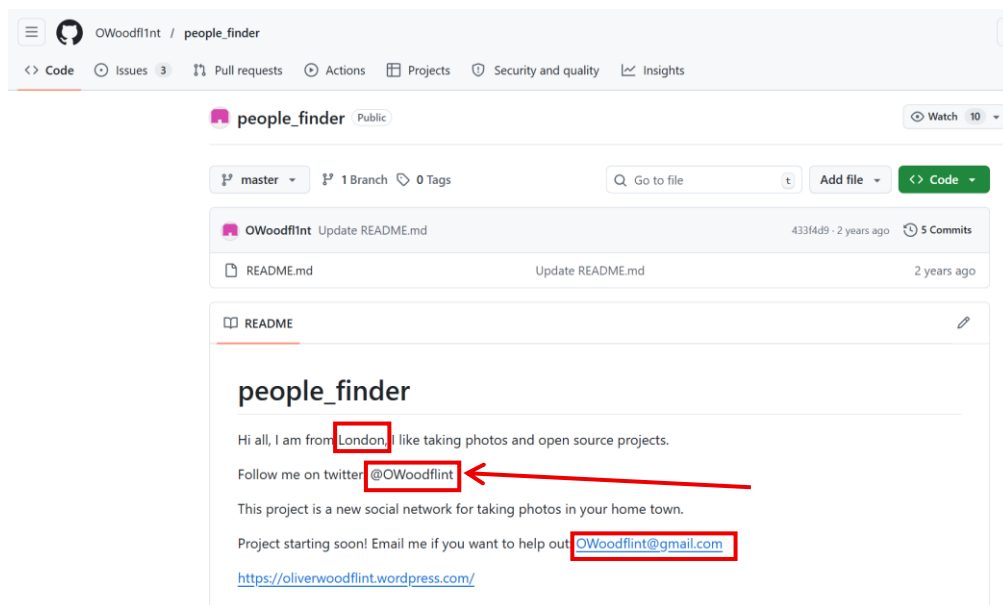

The name/nickname/username 'OWoodflint' stands to my eye, so I'm going to search for it. I started with a simple Google search. The first search result returned a GitHub profile associated with the username, so I opened it.

Opening the GitHub profile I get to his repositories.

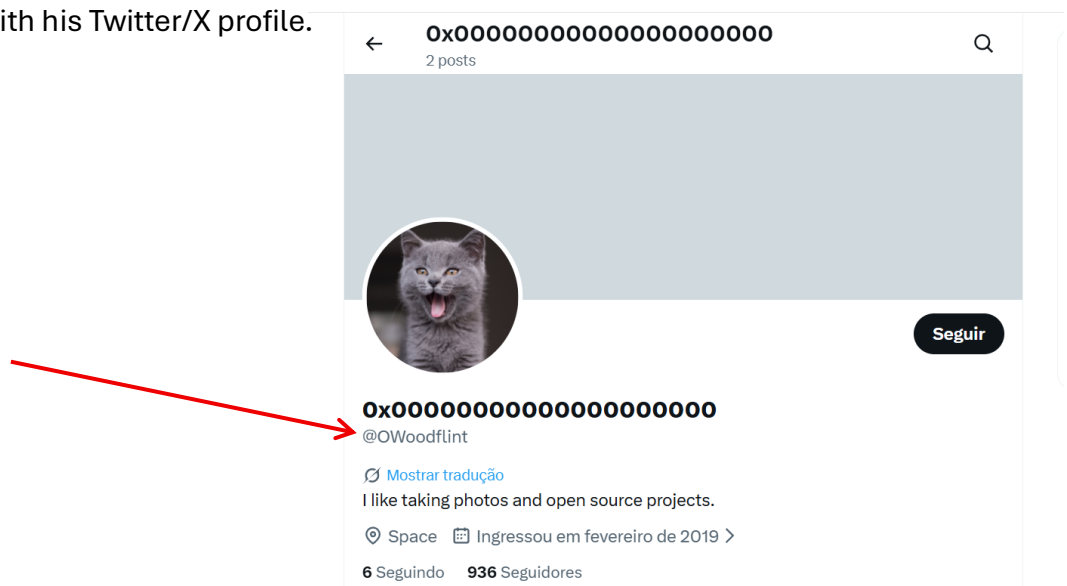

He only has one repository – people_finder. Entering on it, I only see a README.

In this README, there is a lot of information. His Twitter/X profile, an email, a location and a site for his project.

Let's start with his Twitter/X profile.

At this point, I am able to answer to the first question, and the answer is **Cat**.

What is this user's avatar of?

✓ Correct Answer

I also can answer to the second question, because it is on the GitHub profile. He says “I’m from **London**”

What city is this person in?

✓ Correct Answer

Continuing with the investigation, I explore his Twitter and all the posts. He only has two posts:

Posts Respostas Mídia

**0x00000000000000000000** @OWoodflint · 3 de mar de 2019 ...
From my house I can get free wifi ;D
Bssid: B4:5D:50:AA:86:41 - Go nuts!
142 37 421

**0x00000000000000000000** @OWoodflint · 9 de mar de 2019 ...
Hello world!
75 29 249

On the first post he refers to a free Wi-Fi and he exposes the BSSID of it. So, I collect this BSSID and search it on Wigle.net. “Wigle.net is a database that maps Wi-Fi networks using crowdsourced data, allowing correlation between BSSID and SSID.”

more results

As a result, I got the SSID – **UnileverWiFi** – of the WAP e connected to.

What is the SSID of the WAP he connected to?

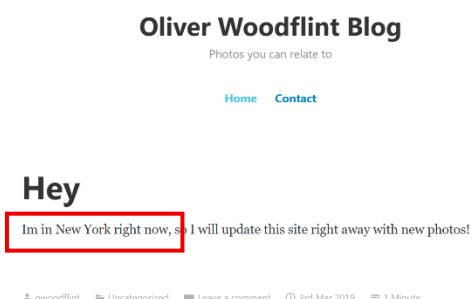

For answering the next two questions, which are related, I already had the answers when I visited the person's **GitHub**. There I already get to see his email address - **OWoodflint@gmail.com**.

What is his personal email address?

What site did you find his email address on?

Investigating a little more and diving into his project site <https://oliverwoodflint.wordpress.com/>, I get to know that Oliver Woodflint (his real name) went to **New York**.

With this information, now I can answer the next question.

Where has he gone on holiday?

New York

✓ Correct Answer

To answer the last question, I had to go to a deeper investigation, as it was a more difficult task. In fact, I had to ask for the tip provided, which said "check the source code".

I started by looking at code that could be on GitHub, but without any result. As I didn't get any results there, I thought that the tip could be related to the site, as it would be a place where it would have source code. I opened the website and the browser's developer tools and was analyzing the code. While I was doing source code inspection, I saw that there should be a print in the page in white letters of the phrase **pennYDr0pper!** (`<p style="color:#ffffff;" class="has-text-color wp-block-paragraph">pennYDr0pper.</p>`), but on the website you couldn't see this phrase. But as the sentence is set to be in white letters and the background of the site is white, and this phrase would be below the phrase "I'm in New York right now..."; I selected by dragging and the word appeared on the site, as you can see in the images below.

In more places in the code, we can see this word that should appear right after the sentence I mentioned before, such as in: `<meta property="og:description" content="Im in New York right now, so I will update this site right away with new photos! pennYDr0pper."/>`

Design a site like this with WordPress.com
